Generative Deconstruction Google Slides

Analyze	Check if the principles already exist according to the principles of instrumental interaction: **reification, polymorphism**, and **reuse**.
Critique	If the principles do exist, do they improve or hinder the system? If they do not exist, what problems does this cause?
Construct	Apply the principles to create a novel instrument and corresponding substrate that improves the system.

	Principles			Actionable behavior
Instruments & Substrates	**Reification**	*of a*	command	transforms a command into an instrument
		of an	effect	transforms effects into a substrate that contains objects, and manages constraints and dependencies
	Polymorphism	*of a*	command	enables an instrument to affect different object types
		of an	effect	enables a substrate to manage different constraints or dependencies
	Reuse	*of a*	command	applies previous actions to different objects
		of an	effect	applies previous effects to different objects
